

It's not just paper

Why specialist items should be securely destroyed and recycled

Hover over each item for more information on the dangers of not recycling each:

Hard drives and laptops

ID cards and credit cards

Branded uniforms and clothing

Materials used to make hard drives, ID cards and clothing can be harmful to the environment if they are not disposed of properly - taking hundreds of years to decompose and potentially polluting soil and water if they end up in landfills.

Shred-it's secure chain-of-custody

- Items are **securely stored**...
- **Safely collected** and transported...
- Shredded, with drive platters and electronic components **completely destroyed**...
- **Securely recycled** with approved partners.

Shredded products can never be accessed, retrieved, reconstructed or reused.

Sustainable disposal of hard drives help to save valuable resources. Metals are reused and energy is created, reducing the environmental impact of production and consumption.

Contact us today to see how we can help you securely and sustainably dispose of your hard-to-recycle non-paper items.
